Course description:

This course lays out the basic concepts and methods of modern syntactic theory. The course develops analyses of major syntactic constructions, illustrating the key notions of derivation, licensing and constraints. It demonstrates how theoretical claims are applied to empirical data and trains the students in developing their own analytic skills. Among the topics covered are: VP-shells, Clausal Structure, raising and control, A-bar movement, islands and variable binding.

מטלות הקורס ומשקל כל מטלה בציון הסופי (בעברית):
