

WANTED: Master's or Doctoral students

We are a highly motivated structural biology lab seeking like-minded graduate students.

We focus on the study of structure and function of biological molecules using X-ray crystallography and other associated techniques. The research is highly interdisciplinary and includes both lab work and computational analysis. You will express and purify proteins, characterise their function via their three-dimensional structure.

Required qualities: Highly motivated, willingness to work hard, creative and critical thinking.

Required qualifications: University degree in chemistry, biology, engineering, biotechnology or medicine.
