Elfi-Tech is Hiring

Elfi-Tech is a medical device company that developed a series of innovations for the medical, clinical and consumer markets based on its unique ability to conduct continuous and non-invasive monitoring of numerous physiological parameters.

We are looking for a biomedical/electrical/software engineer for a versatile job position for the SW R&D team that includes:

- Algorithm implementation and integration to embedded systems
- Researching and analyzing physiological signals using advanced algorithms
- Developing tools for data acquisition
- Designing and conducting experiments using a non-invasive optical sensor
- Clinical study support/Field support for clients in Israel and abroad

Qualifications

- Knowledge in Digital Signal Processing
- Knowledge in Matlab and C
- High technical capabilities
- Capable of working independently
- Excellent problem solving abilities
- Team player, innovative thinkers, highly motivated
- Fluency in English
- 0-4 years’ experience in an Engineering position

Employment Type

Full-time

Location
