Economic Theory-Macro:

Course:

Economic Theory-Macro

Course Code: 142-2-5101

Instructor: Nadav Ben Zeev

Course Description:

The course is designed to provide an introduction to the basic and advanced theories in macroeconomics, serving as a basis for macroeconomic research both in academic institutions and in public research institutions. The course will focus on advanced macroeconomic models that serve as a basis for both academic and public research institutions. The course will be divided into two parts: first, basic deterministic models in macroeconomics, such as the Solow model, the optimal growth model and overlapping generations. Second, the stochastic model of real business cycles (RBC) will be studied. Throughout the course, students will be taught how to solve these models in order to understand long-run economic growth and short-run economic fluctuations.
