The Center for Women’s Health Studies and Promotion at Ben-Gurion University of the Negev

Annual Report – 2013

End of Academic Year in Isha Be-Shela

Ben-Gurion University of the Negev
1. **Name of the Center**: THE BEN-GURION UNIVERSITY OF THE NEGEV CENTER FOR WOMEN’S HEALTH STUDIES AND PROMOTION

2. **Center Directors**: Dr. Dorit Segal-Engelchin and Prof. Julie Cwikel, PhD, The Charlotte B. and Jack J. Spitzer Department of Social Work

3. **Center Advisory Board**
   Prof. Moti Hershkowitz, Vice President and Dean for Research and Development
   Prof. David Newman, Dean of the Faculty of Humanities and Social Sciences
   Prof. Gabriel Schreiber, MD, Dean of the Faculty of Health Sciences
   Dr. Naama Atzaba-Poria, Department of Behavioral Sciences (on sabbatical)
   Dr. Rivka Berger, MD, Internal and Behavioral Medicine
   Prof. Aya Biderman, MD, Family Medicine
   Dr. David Geffen, MD, Oncology, Soroka University Medical Center
   Dr. Leeat Granek, PhD, Department of Medical Sociology
   Prof. Ilana Harman-Boehm, MD, Internal Medicine
   Dr. Efrat Huss, Department of Social Work
   Dr. Esther Iecovitz, Department of Gerontology
   Prof. Ora Kaufmann, Department of Behavioral Sciences
   Ms. Orly Liberman, Recanati School of Nursing
   Dr. Noah Liel, MD, Cardiology, Department of Internal Medical
   Dr. Sheryl Mendlinger, Northeastern University
   Dr. Hagit Perez, Department of Epidemiology
   Prof. Orly Sarid, Department of Social Work
   Prof. Golan Shahar, Department of Behavioral Sciences
   Prof. Ilana Shoham-Vardi, Department of Epidemiology
   Ms. Sheila Warshawsky, MS, Faculty of Health Sciences
4. **Center Steering Committee**

Prof. Aya Biderman, MD, Family Medicine
Prof. Julie Cwikel, Department of Social Work
Prof. Ilana Harman-Boehm, MD, Internal Medicine
Dr. Efrat Huss, Department of Social Work
Ms. Orly Liberman, Recanati School of Nursing
Dr. Hagit Perez, Department of Epidemiology
Prof. Orly Sarid, Department of Social Work
Dr. Dorit Segal–Engelchin, Department of Social Work
Prof. Ilana Shoham-Vardi, Department of Epidemiology
Ms. Sheila Warshawsky, MS, Faculty of Health Sciences

---

**The Center Acknowledges its Generous Supporters**

*The Center for Women's Studies and Promotion at Ben-Gurion University of the Negev strives to improve the lives of women, their children and their families through focused programs. The supporters of the Center's activities come from all over the world and help us maintain our vital programs that benefit the women of the Negev. This work is made possible in part by the generous support of our donors. We try to keep in touch with as many of you as possible and to learn of your interests and issues. We hope you find this annual report as a means to opening dialogue and keeping in contact with us. We are joined by the many you have helped, through funding programming at the Center, in thanking you for your care and generosity.*

---

Thank You!
Introducing the Center for Women's Health Studies and Promotion's New Director: Dr. Dorit Segal-Engelchin

Dr. Dorit Segal-Engelchin is a Senior Lecturer and the Deputy Chair of the Spitzer Department of Social Work at Ben-Gurion University of the Negev. She joined the Center for Women’s Health Studies and Promotion in 2002 as a postdoctoral fellow, after completing her Ph.D. at Tel-Aviv University, and will now serve as director of the Center. Prof. Julie Cwikel will continue to be involved in the Center as co-director.

One of her major research interests is diverse family structures, with a particular focus on women's choices regarding family formation and child rearing, and their impact on the mother’s well-being. Among the unique family configurations that she has been studying is the `hetero-gay family`, a relatively new family configuration that is headed by a heterosexual mother and gay father who conceive and raise children together and has not been included or identified in previous academic research. Dr. Segal-Engelchin is currently establishing a new program, which is designed to address the needs of and promote research for all nontraditional family configurations in the Negev, the Counseling Project for Diverse Family Configurations.

Another of her key research areas is in women's health, focusing on factors associated with women's coping and health-promoting behaviors, including the intergenerational transmission of health behaviors from mothers to daughters.

Dr. Dorit Segal-Engelchin, the New Director of the Center
Mind-Body Approaches to Women’s Health

As we mentioned in last year’s report, we believe that cutting edge research and practice lies in a better understanding of how the mind interacts with the body and affects physical and mental health. We are now developing applications, based on our findings from on-going research at the Center that will prevent disease and promote psychological and physical health. These applications incorporate cognitive behavioral therapies, relaxation techniques, somatic-experiencing (SE), visualization and imagery, meditation, mindfulness, specific art-based techniques, and other psycho-educational approaches, to prevent and treat a wide range of challenges to women’s physical and mental health. This year, we continued to train our mental health practitioners and develop new areas of research. We are pleased to present the 2013 Annual Report to share some of the exciting new developments and programs at the Center.

**Developing New Treatment Techniques for Women Coping with Infertility Problems**

Based on the research of Dr. Johanna Czamanski-Cohen's dissertation, where we conducted a clinical trial to test the efficacy of cognitive-behavioral methods in reducing stress associated with diagnosis and treatment of infertility, we have begun developing treatment applications. Dr. Czamanski-Cohen’s research on women undergoing in-vitro fertilization (IVF) has showed that women practicing cognitive behavioral interventions (CBI) were shown to have reduced stress, and when CBI was practiced at home, they demonstrated improved pregnancy rates. Her ground-breaking results suggest that practicing relaxation techniques can assist women in normalizing their stress reactions. We established a research group to develop new ideas, led by Prof. Orly Sarid, in which we are considering how our findings might be applied to women before they undergo IVF (in-vitro fertilization), in order to reduce the distress, cost and time in treating infertility in couples. This working group is considering treatment options ranging from interpersonal therapy to e-therapy using telephone and internet communication programs, such as Skype, as possible modes of delivery of mind-body treatment techniques.
Mind-body Techniques for Cancer Patients and Their Family Members

Support from a grant from the Oncology Patients Memorial Fund has helped subsidize treatments offered to cancer patients and their families, who have difficulties leaving the house and accessing psychosocial support services. In collaboration with Prof. David Geffen, from the Oncology Unit at Soroka Medical Center, and Dr. Yoram Zinger, from the Long-Term Care Unit of the Negev, we are in the process of organizing support services, such as psycho-education, relaxation techniques and cognitive behavioral therapy, through webcams on personal home computers. The protocol calls for initial home visits to establish a rapport and a treatment alliance, with additional meetings conducted over the webcam. Naturally, the treatment will be tailored to the unique needs of each patient or family member.

Continued Training on Mindfulness Techniques in Treatment

Ms. Yael Schweitzer, MSW, Licensed Clinical Social Worker and Israeli psychotherapist living in Portland, Oregon, returned to Beer-Sheva in October, 2013. With her expertise and guidance, the Center is conducting intensive training for 16 mental health practitioners on how to incorporate mindfulness techniques into practice with clients. Mindfulness is an integrative psychotherapy technique developed by Prof. Jon Kabat-Zinn, PhD, Professor of Medicine emeritus, University of Massachusetts Medical School, that involves focused attention, a non-judgmental stance, and breathing and relaxation techniques. Clinical trials on the use of Mindfulness as a therapy technique have been conducted on a variety of medical and psychiatric disorders in research centers around the world. A weekly Mindfulness practice group for academic and professional staff members, led by Prof. Vered Slonim-Nevo and Miriam Gaber, MSW, continued to meet throughout the year in the evening at various locations around Beer Sheva. In addition, Prof. Julie Cwikel has incorporated these techniques at BGU in training social workers to work with clients in the health care system.
Combining Cognitive Behavioral Techniques with Art Therapy (CBI-ART)

Combining aspects of art with strategies of empirically tested cognitive behavior therapy techniques has led to a research, practice and treatment innovation at the Center, evolving from theoretical and clinical work done by our members, which was generously supported by Aileen Whitman of Philadelphia, PA. This year, we expanded the use of this protocol to individual clients suffering from anxiety and chronic pain, and coping with cancer and infertility problems. Evaluations of the therapy sessions showed a significant reduction in self-reported distress. The protocol was taught to the psychotherapists working in Isha Be-Shela, and many have adapted it for use in their practice. We also completed work on an evaluation paper of compiled client data, which we hope will be published soon. This data was presented at both a local and an international conference, by Dr. Johanna Czamanski-Cohen.

New Research Initiatives

The Health and Quality of Life of Women in Diverse Family Configurations

Following her previous studies on single mothers by choice and mothers in hetero-gay families, Dr. Dorit Segal-Engelchin is now conducting a new study designed to assess the effects of diverse family configurations on women's health and quality of life. The study compares differences in quality of life and health outcomes among married mothers, single mothers by choice, mothers in hetero-gay families, divorced mothers, and partnered and un-partnered lesbian mothers.
Examining Treatment Preferences for Women Post-Partum, With and Without Post-Partum Depression

In collaboration with Ms. Saralee Glasser, an epidemiologist and Israel’s leading expert on post-partum depression, from the Gertner Institute for Epidemiology and Health Policy Research, and Dr. Racheli Magnezi, a health economist from Bar-Ilan University, we have just received funding for a study to determine the treatment preferences of women after childbirth, including options for web-based treatment. We will evaluate the treatment options for women who had symptoms of post-partum depression or anxiety and for women who did not have symptoms for these conditions following the birth of a child. This research proposal was funded by the National Institute for Health Research. Research has begun by Ms. Tali Rosenbach, a Master's student, who is evaluating these issues among women, using internet forums.

 Mothers' Strategies in Strengthening Daughters' Body Image

In collaboration with Dr. Maya Maor, a recent graduate of Gender Studies at Ben-Gurion University of the Negev, we analyzed qualitative data, focusing on how mothers develop strategies to help their daughters resist prevalent media and cultural messages negatively influencing their body image. This paper has been submitted for publication and was presented at the European Health Psychology Conference in Bordeaux, France in July, 2013. Analysis of the data from this study is continued with the collaboration of a new PhD student, Ms. Efrat Cohen-Noyman, who is developing her thesis, which will answer questions regarding how mothers can help their daughters develop positive body image.

The Coping of Hospice Medical Professionals

In collaboration with Dr. Yoram Singer, head of the Negev Hospice Services, we have begun two research projects on the challenges hospice medical professionals face when working with terminally ill patients, with regards to care and coping. The first project involves interviewing Bedouin patients on how they view the service of hospice care and their illness, a collaborative effort between Dr. Yoram Singer, Ms. Naamah Razon, a medical student, Dr. Maya Maor, and Prof. Julie Cwikel. The second project involves how medical staff members conduct condolence visits when a patient passes away.

Coping of mothers during times of security stress

At the beginning of the year, we initiated a survey of the coping strategies used by mothers of small children in times of acute security stress, such as wartime, in
comparison with the coping strategies used by mothers at other times when the security situation is calm and daily life proceeds as usual. The results of the study showed that during a time of acute security stress, mothers were less likely to use coping strategies, such as listening to music and seeing friends, which were previously found useful in calming their small children. This study was designed by Limor Niego and Prof. Julie Cwikel and was based on an earlier study published by Dr. Dorit Segal Engelchin and Prof. Julie Cwikel.

**Ongoing Research**

**Art-Based Trauma Assessment for Women in the Army**

We continue to collect data for assessing the sources of stress and resilience of students who served in the Israel Defense Forces (IDF). This study uses the arts-based trauma assessment (ABTA) procedure that was developed and published by leading researchers at Ben-Gurion University of the Negev, Dr. Efrat Huss, Prof. Orly Sarid, and Prof. Julie Cwikel, in 2010. We hope this initiative will further our understanding of the impact of combat and non-combat army-related experiences on how women return to "normative" roles in society. This study was funded by the Brandeis University’s Hadassah-Brandeis Institute and is being jointly conducted by Dr. Ephrat Huss and Prof. Julie Cwikel, together with two Master's students, Ms. Agam Marom and Ms. Miri Kogan. A new student, Ms. Tali Shternberg, will be evaluating the ABTA tool among patients identified with Post-Traumatic Stress Disorder, in collaboration with a community psychiatric service in Beer-Sheva.

**Using Webcams as Tools for Behavior Change**

Following the successful completion of our trial on the use of the webcam as a way to prevent work-related muscular-skeletal disorders, we continue to consider the applications of the webcam for improving workers’ health. Our PhD student, Eyal Levy, an ergonomist working at Intel Corporation, together with Dr. Meirav Taib-Maimon, from BGU's Department of Information Systems Engineering, is preparing a research proposal on the use of the webcam as a tool to evaluate ergonomic aspects of workers’ health. In this study, they will incorporate new programming technologies which have been introduced in the workplace, such as those that record the use of keyboard strokes.
as an indicator of computer use. Through these monitoring efforts, we will be able to identify groups at high risk of muscular-skeletal disorders.

**Alternative Family Structures**

Dr. Dorit Segal-Engelchin, in collaboration with Prof. Pauline Erera of the University of Washington, continues to analyze qualitative data from interviews with parents raising children in the hetero-gay family structure (a heterosexual mother who contracts with a gay father to raise their biological child together). This year, a fourth article based on the qualitative data has been accepted for publication, focusing on the motivations of gay men for choosing to co-parent with heterosexual women and the characteristics that they were seeking in selecting birth mothers for their children. An additional paper discussing other aspects of this family structure is now in process.

Dr. Dorit Segal-Engelchin continues to teach an academic course on alternative families that she recently developed for undergraduate social work students. The course includes a strong emphasis on women’s family choices in contemporary society, and on the challenges faced by women in diverse family structures.

**Understanding Women’s Traumatic Birth Experiences**

Working together with a nurse-midwife researcher, Dr. Ofra Halperin, a lecturer at Emek Yezreel College’s nursing faculty, we completed a study on how women view their birth experiences and how these experiences impact their post-partum adjustment period. Women were studied at two hospitals in northern Israel, in order to gauge how they assess their birth experiences, both directly following and 6-8 weeks after delivery. A paper discussing the results and implications of this study was presented at a conference in Berlin by Dr. Halperin and a conference in Israel by Prof. Cwikel and has now been accepted for publication. An additional paper further analyzing their results is now in preparation.

**Mothers and Daughters – Transmission of Women's Health Behaviors**

This has been an on-going project, built on the rich set of qualitative and quantitative data, which formed the basis of Dr. Sheryl Mendlinger's doctoral dissertation, completed in 2009. Analysis of these findings is continued by Prof. Julie Cwikel, Dr. Dorit Segal-Engelchin, and current Master's student Daya Perach, focusing on the evolution of
health-promoting behaviors such as exercise, positive body image and nutrition. A paper was accepted this year demonstrating how education and exposure to parental smoking during childhood shapes the smoking behavior of women throughout their adulthood.

**Fertility, Technology and Psychosocial Intervention**

Problems of infertility are a major source of stress in the lives of many women. This project combines biological and psychosocial intervention, in order to increase fertility and decrease the need for invasive procedures, such as in-vitro fertilization (IVF). Prof. Julie Cwikel, Prof. Orly Sarid and clinical biologist Dr. Iris Harvadi are part of the BGU research team working on this project, in collaboration with Prof. Eitan Lunenfeld, Director of Gynecology and Obstetrics at Soroka Medical Center. Dr. Johanna Czamanski-Cohen’s thesis was approved, and she has had two papers accepted from her dissertation with an additional paper under review. In addition, findings from her study on how infertility affects couples and how they cope was presented at a local conference. Prof. Julie Cwikel and Prof. Orly Sarid continue to explore options for collaborating with Prof. Martin Kammener, from the Imperial College of Medicine in London, on treating women with post-partum depression through Skype.

**Graduate Students Creating New Research in Women’s Health**

**Two PhD students have completed their studies!!!**

*Dr. Svetlana Prokoshev*, from the educational psychology program, graduated this May, after completing her study on assessing cognitive deficits among breast cancer patients. One paper from her findings has been published and a second one is in process.

*Dr. Johanna Czamanski-Cohen* had her thesis approved, studying the relationship between stress, DNA integrity, and the physiological effects of cognitive behavioral interventions in women undergoing IVF treatment. She was supervised by Prof. Orly Sarid, Prof. Julie Cwikel and Dr. Iris Harvardi. She is currently a post-doctoral research fellow at the Ziama Arkin Parent and Infant Relations (PAIR) Institute at the School of Psychology of the Interdisciplinary Center (IDC) in Herzliya, focusing on studying the transition to parenthood.
Continuing PhD Students:

**Tzipi Hornik-Lurie** has completed three manuscripts for her PhD thesis on the topic of "Challenges to Israel's Primary Health Care System in the Treatment of Mental Health Problems Among Those Seeking Care - Implications for Health Care Policy." One manuscript, “Use of unconventional medical practices by primary care patients - religious resources vs. complementary or alternative medicine services”, has been published in the journal *Complementary Therapies in Medicine*. A second manuscript “The influence of physicians' recommendations on primary care patients’ reluctance toward mental health treatment” has been accepted for publication by the *Journal of Psychiatric Services*. The third manuscript, “Does specializing in family medicine improve the detection and diagnosis of mental health problems?” is currently under review. Her research has been supported by a student grant from the Gertner Institute for Epidemiology and Health Policy Research. She is supervised by Prof. Julie Cwikel.

**Yael Damri** is now collecting data for her thesis on the reflective capacity of parents and their school-aged children among families with attention-deficit and hyperactivity disorder (ADHD), compared to families without ADHD. The study is based on the mentalization theories of Profs. Peter Fonagy and Ariete Slade, and is supervised by Prof. Cwikel, Prof. Naama Atzaba-Poria and Dr. Shosh Arbel from Soroka Medical Center’s Child Psychiatry Unit.

**Avigdor Kaner** has developed an innovative internet-based intervention for new fathers, based on his initial findings on the experiences of new fathers during the first year postpartum. His study is designed to evaluate the effectiveness of this internet intervention for new fathers. He is now in the process of recruiting fathers for the intervention groups. His preliminary results will be presented at both international and local conferences. He is supervised by Dr. Dorit Segal-Engelchin and Prof. Julie Cwikel.

**Efrat Cohen-Noyman** is developing a proposal that will study mothers and teenage daughters, and their attitudes regarding how mothers help or hinder their teenage daughters in developing positive body image. She is supervised by Prof. Julie Cwikel.
Shimrit Engelsman is working on a mixed method study to explore the birth experiences of ultra-orthodox women giving birth in a cultural milieu that encourages high fertility. She has completed 20 qualitative interviews as the first stage of her PhD work, and now she is developing a quantitative interview schedule with her subjects. She is supervised by Dr. Ephrat Huss and Prof. Julie Cwikel.

Master's Student Who Completed Theses:

Amit Shapira completed her thesis this year, titled "The meaning of professional success in the life stories of Ethiopian women". She was supervised by Dr. Dorit Segal-Engelchin.

Continuing Research by Master's Students

Tali Nevo is continuing her thesis, titled "The meaning of using an anonymous sperm donor from the single mothers' perspective". She is supervised by Dr. Dorit Segal-Engelchin.

Daya Perach-Yosef is continuing her thesis, titled “Mothers and daughters' health behaviors: An inter-generational perspective”. She is supervised by Dr. Dorit Segal-Engelchin and Prof. Julie Cwikel.

Developing new avenues for fundraising with Marlene Katz

Marlene Katz, a health advocate from Melbourne, Australia, visited the Center in May and again in October. Marlene, a successful businesswoman with extensive experience in developing and promoting new ideas, worked with Center staff to generate new ideas for economic growth. Together, we are developing strategies for fundraising for the Center. One option we have explored is the innovation of “crowd funding”, attracting funds for specific projects using social networks on the internet, at different levels of support. Currently, we are working on setting up the "crowd funding" website.
Community Activities

Promoting the Health of Mothers and Infants

Following presenting our ideas for establishing a national program to address postpartum depression in the Knesset last year, Prof. Julie Cwikel proposed the "Mom to Mom" program in local and national organizations. Prof. Cwikel, a member of the National Advisory Board to the Minister of Health, introduced a referendum on the establishment of adequate services to meet the needs of women who are screened as positive for Perinatal Mood and Anxiety Disorders (PMAD) in perinatal care services nationally. She also presented her ideas on this topic at the JDC- JOINT Israel forum for developing programs for ages of 0-3.
Prof. John Goldsmith Memorial Prize Winners

The tradition continues of granting an academic prize to students working in and researching the areas of occupational medicine, epidemiology, and/or environmental science, honoring the memory of Prof. John R. Goldsmith. This year two prizes were awarded.

1. **Maayan Yitshak-Sade** was awarded the Goldsmith Memorial Prize for her work, "Air Pollution and Cardiovascular Risk Factors, Morbidity and Mortality: Spatial and Temporal Associations." She is a PhD student in the Faculty of Health Sciences under the supervision of Prof. Victor Novack, the Head of Soroka Clinical Research Center.

![Prize Winner Ms. Maayan Yitshak-Sade](image)

2. **John-Michael Davis** was awarded the Goldsmith Memorial Prize in recognition of his work, "The Informal E-waste System of Israel-Palestine: Contexts, Problems and Ways Forward." His work was supervised by Dr. Yaakov Garb, from the Jacob Blaustein Institutes for Desert Research at Sede Boqer.

![Prize Winner Mr. John-Michael Davis](image)

Both students will give an overview of their work at a departmental ceremony. A list of the winners from earlier years is shown below.

Community Health Promotion Projects

Mom to Mom - Em le Em

Mom to Mom is now a well-established program, providing support for new mothers and their infants in Beer-Sheva and the Negev. We are now marking the eighth year of this special volunteer project modeled after a successful program that began in Boston, Massachusetts. The program also operates in Jerusalem under the direction of Dr. Marsha Kaitz, a developmental psychologist at Hebrew University of Jerusalem. In this program, veteran mothers receive volunteer training in order to provide one-on-one support to new mothers who feel that they do not have adequate confidence during the first year following childbirth. The program’s volunteers provide much-needed support on a weekly basis through home visits. By supporting new mothers, we help them foster healthy childhood development for the next generation.

To date, 28 groups of volunteers have been trained and have conducted close to 500 home visits to new mothers. Since the beginning of the project, we have matched volunteers with 368 new mothers. There are currently 25 active mother-volunteer pairs. We are considered the leader in this field in the Negev and are have been asked by local councils in the region, including Arad, Rahat, Beer-Sheva and Ofakim, to advise them on setting up and training staff for similar projects. This year, we continued working with the same winning team: Limor Niego, MSW - clinical social worker, Mati Talmon -
public health nurse, Nirit Segal – administrator, and Prof. Julie Cwikel and Dr. Dorit Segal-Engelchin – supervisors.

This year we also continued running a weekly mothers group that combines group discussions with didactic lectures on issues concerning mothering infants. Approximately 30 women developed parenting skills, and established supportive contacts and social circles with other mothers from this open group throughout the year. Special topics presented included: coping with immunizations in light of the polio scare, physiotherapy and child development, yoga for mothers and infants, nutrition, optimizing sleep for parents and children, handling difficult situations in parenting, and managing relations with parents and in-laws. In addition, we have started teaching principles of reflective parenting as were implemented in the Positive Parenting Program described in more detail below.

Isha Be-Shela – Women's Counseling Project in the Negev

This marks the fifth year of our counseling program, Isha Be-Shela, the first counseling center for women in the Negev. Leadership in the project is provided by Andrea Ifergane, MSW, clinical director, and by Vered Deichman, MSW, together with Prof. Ruth Siton, psychologist, and Prof. Julie Cwikel. The staff now includes 16 psychotherapists, including one male therapist, who come from varied backgrounds (psychology, social work, and art therapy) and provide individual psychotherapy to women and men of all walks of life from throughout the Negev (Beer-Sheva, Arad, and Sderot). Most of the therapists are graduates of BGU. Jill Zimmermann joined forces with Nirit Segal in order to provide administrative support. The staff met regularly over the course of the year for monthly training sessions and case presentations, along with peer group sessions twice monthly. This year we were glad to welcome back Israela Meyerstein, LCSW-C, LCMFT, a family therapist from Philadelphia, who administered a workshop on “Shuffling Family Systems in Family and Couple Treatment”.

Since the beginning of the project, we have seen over 300 women in psychotherapy treatment, more than half of them young women between the ages of 20-30. Many of our clients have faced significant financial problems and have benefitted from the subsidized psychotherapy we are able to provide with the support of our donors.
SEE_FAR CBT Training for Mental Health Practitioners

Through Isha Be-Shela, we conducted a second training on SEE-FAR CBT, a combination of somatic experiencing, fantastic reality and cognitive behavioral therapy. This training was led by Dr. Miki Doron over three weeks and with the participation of 15 advanced practitioners from around the Negev. By now, most of our Isha Be-Shela practitioners have partaken in this training.

Somatic Experience Training for the Promotion of Mental Health

Following the training of some of our staff members in the techniques of Somatic Experiencing, educator Gina Ross conducted a training program over the course of a week, during the end of June and beginning of July. Twenty-five mental health professionals from around the Negev participated in this Level 1 training program. The treatment program is based on cutting-edge research on the brain and its reaction to traumatic experiences. Our staff members participated, along with other mental health practitioners, to enhance their treatment skills in the area of dealing with physical and mental health-related trauma.

From Left to Right: Prof. Ruth Siton, Prof. Julie Cwikel, Ms. Gina Ross, Dr. Shragit Greenberg, Ms. Nirit Volk
Positive Parenting Program

Thanks to the generous support of Judge Leon Kaplan, the Center continues to expand opportunities for supporting new parents in the Negev. This year we benefitted from a grant from the Sol Leshin Foundation for funding the research collaboration between Ben-Gurion University of the Negev and the University of California, Los Angeles, aiming to implement, evaluate, and disseminate a reflective parenting intervention for high-risk and underserved families. The UCLA researcher team was led by Dr. Blair Paley, Dr. Catherine Mogil, and Dr. Patricia Lester, together with Dr. John Grienenberger and Dr. Regina Pally from the Center for Reflective Parenting in Los Angeles.

Last summer, Prof. Naama Atzaba-Poria and Ms. Noa Gueron (a PhD student who is currently completing her thesis under the supervision of Dr. Atzaba-Poria) came to Los Angeles for five weeks, in order to complete Level 2 training in Reflective Parenting (RP), supervised by Dr. John Grienenberger and Dr. Wendy Denham. As part of the training, they ran two parenting groups for parents of school-aged children.

Prof. Naama Atzaba-Poria and Ms. Noa Gueron with parent group participants in Los-Angeles (August, 2013)
We continue teaching a Master's seminar on positive parenting skills for Master's students of social work (MSW). This year, the format include elements from the reflective parenting training, with topics such as child temperament, setting boundaries, and dealing with child distress without losing parental perspective. The seminar was led by Prof. Cwikel and Noa Gueron, a graduate student, who was supervised by Prof. Atzaba-Poriah and submitted her thesis in development psychology. There are 16 MA students in the practicum, and each student works with one set of parents, who have a child between the ages of 6 months and 2 years. The students teach reflective parenting skills and provide guidelines and counseling.

The program includes emphasizes the role of fathers in childhood development. In addition, different topics are presented throughout the year including: coping with postpartum depression, communication between couples, parenting adopted children, milestones in child development, historical and cross-cultural approaches in parenting, understanding the importance of play and reading to children, and coping with problems with sleeping and feeding.

This year, we completed training on the Parental Developmental Interview (PDI) for seven researchers and graduate students. The PDI was developed originally by Prof. Arieta Slade and has been used to focus on the reflective capacity of parents with regard to their children. The training was carried out by webcam connection between BGU and the Center for Reflective Parenting in Los Angeles. The PDI has now been incorporated into both teaching practice and research by the group’s participants.

During the course of this academic year, Prof. Julie Cwikel, Limor Niego and Noa Gueron collaborated with the Parenting School of the Beer-Sheva Municipality to implement a training program in which paraprofessional leaders of parenting groups were trained in a number of areas, including promoting reflective parenting, working with parents on handling security stress, sleep and eating problems with children, and self-care for parents. This program, which concluded in January, 2013 trained 12 group leaders (the trainers who work with groups of parents), who are now spreading their skills in their work with parent groups. We are now negotiating with the Municipality regarding training a new group of leaders of parents groups.
In addition, both Prof. Cwikel and Prof. Atzaba Poria have been asked to join the steering committee of the newly established WIZO Day Care Center, Beit Fanny, at Ben-Gurion University of the Negev, in order to develop new programs for working with parents.

Biogas Digesters for Unrecognized Bedouin Villages – A Project of the Middle Eastern Research Consortium (MERC)

Forty percent of the Negev's Bedouin Arabs currently reside in unrecognized villages without formal means of waste disposal, instead relying upon biogas digesters that recycle organic material (human and animal waste) into renewable energy for lighting, cooking and heating. Introducing the biogas digester as a means for environmental and social change is the focus of a research group funded by the Middle East Research Consortium (MERC) that brings together diverse agencies and actors from across the Negev, including the Arava Institute for Environmental Studies (Kibbutz Ketura), the
Abu Basma Regional Council for Unrecognized Villages, the Negev branch of the Israel Society for the Protection of Nature (SPNI), and professors from BGU’s Jacob Blaustein Institutes for Desert Research.

The goal is to develop a protocol for teaching Bedouin women in unrecognized villages in the Negev fundamental aspects of the project. The aims are to promote general knowledge about health, the environment, and recycling waste materials, along with the benefits and functionality of the biogas digesters, to women who live on sites which they were built. During this year, we succeeded in overcoming some problems formerly encountered when organizing women's community activities in the Bedouin sector, such as women not having enough spare time to invest in the biogas project as they struggled to meet their other domestic chores.

On the two sites of the project, village women were organized into discussion groups, discussing women's community activities in the village that relate to environmental issues, based on the model of the project, described above. At the first site, the family members were taught how to solve maintenance problems on the biogas digester, and are now supplying it with organic waste on a regular basis. The digester has produced compost, and in turn the family was able to plant approximately 100 olive trees. A gas refrigerator had been installed in the family's kitchen, and the family now has the benefit of a gas-operated water heater. Apparently, there is a lack of hot water during the winter, and the family previously had to heat their bath water on a wood fire. Recently, the farmer initiated a women's community activity at this site. About 15 women from the neighboring families attended a training course (consisting of a series of meetings) on the subjects of recycling their families' organic waste and reusing slurry (waste and water) produced.

At the second site, we completed the training but women were not able to get involved in maintaining the digester. At this site, the men maintain the digester but the family has turned the site into an education center on the project, for their neighboring villages. The women are involved in the educational aspect of the project.
In the photos above, one can see the interest generated by the lectures and demonstrations that were given inside a kitchen, which highlighted subjects such as the importance of cleaning and safe disposals of waste and its effects on health, the value of cooking and heating gas and keeping the food safely fresh in a cold refrigerator, and the technical aspects of operating the kitchen utilities.

We have begun working with the Bedouin community at Um Batim, a third site that evolved from exposure to the two earlier biogas digesters and an excellent example of "diffusion of innovation" that is occurring among the Bedouin townships of the Negev. Experience with the two initial sites led the team to design a more affordable system. In collaboration with the Israel Nature Preservation Society, we have succeeded in establishing an educational program on environment and health literacy which is currently conducted with a group of 15-20 women on a weekly basis.
A sample of the participants in the women’s environmental education group at the Um Batim site

The group leaders include a Bedouin woman health educator and an educational leader from INPS. The first wave of data on environmental issues and health has been collected for the program evaluation.

We are very pleased to report that Wissam Sedawi has progressed to being accepted as a Ph.D. student under the supervision of Dr. Orit Ben-Zvi Assaraf, with Prof. Julie Cwikel part of her committee. She is continuing to work on the issue of the environmental awareness of elementary school children in the area around Abu Kaf, where we will be building a biogas digester. She will be addressing issues of waste management, how children feel about the place where they live and awareness of environmental hazards in her research. In the next section are listed the papers and presentations that were based on her Master's thesis work, supervised by Dr. Orit Ben-Zvi Assaraf.
Professional and Community Activities of Center Researchers and Scholars (Listed in Alphabetical Order by Last Name)

With great pride we share with you many of the professional and community activities of the Center’s researchers and scholars during 2013.

Research Grants

2012-2013: National Committee on the Reduction of Infant Mortality, Ministry of Health, with I. Belmaker: Intervention to reduce the rate of birth defects and infant mortality in the Bedouin population of the Negev.

Synopsis of Research and Activities - Main Achievements

In the 2012-2013 academic year we continued our ongoing collaborative multi-faceted intervention on reduction of infant mortality and promoting maternal and child health in the Negev Bedouin population, with the Ministry of Health, Soroka University Medical Center, Clalit Health Services and a local Bedouin NGO (Ajeek).

Together with Ajeek we launched a website www.salam-tak.com (in Hebrew and Arabic) dedicated to health, with a specific focus on mothers and infants. Based on our report: Health of Negev Bedouin Children, submitted to the Bernard Van Leer Foundation, several community projects have been funded by the Bernard Van Leer Foundation. The projects are run by Ajeek. They include: installation of solar panels in homes of children who live in unrecognized villages with health conditions requiring electricity; experimental model providing ambulance services to Bedouins in unrecognized villages; peer instructors working in the community
with mothers and adolescents; and an ongoing forum of Imams (Islamic religious leaders) and health care providers.

We continued our work in the field of maternal and child health focusing on long term associations of a variety of pregnancy complications and long term maternal health, with our colleagues from Soroka University Medical Center.
