Discussions in microbial ecology (1 credit)
The microbial ecology discussion club aims to increase student and faculty exposure to the rapidly evolving microbial ecology field. These meetings provide a unique opportunity to promote interest in research while learning from experts about knowledge gaps and future research questions. Additionally, the discussion meetings are a motivating tool and contribute to developing a habit of continually studying. Each semester we will discuss at least 10 manuscripts from the leading microbial ecology journals. Before the meeting, the students will be requested to read a manuscript and summarize the study's hypotheses, objectives, and main conclusions.
