An Introduction to Systematic Reviews and Systematic Maps

Are you conducting a literature review and wonder how to deal with different biases; how to be more transparent, comprehensive, objective; what is actual golden standard for synthesis of research evidence? If so, this lecture will try to give answers to your questions. It will introduce methods for systematic evidence synthesis, including the differences between traditional literature reviews and systematic methods. It will also compare and contrast systematic review and systematic map methods and explain when each is appropriate. Finally, it will discuss common ways in which review teams work and how to plan a review project.
