

Fifteen years beyond the Getz-Saltz framework for generating and analyzing movement paths on ecological landscapes

# Prof. Wayne M. Getz

Department of Environmental Science, Policy and Management,  
University of California, Berkeley, USA

09/03/2021, \*\*16:00\*\*, at your nearest available Zoom machine

I will begin by providing some historical background on my connections with David Saltz, his students, and my involvement with the Movement Ecology group that met 15 years ago at the Institute for Advanced Studies of the Hebrew University of Jerusalem. I will then discuss work that I did at the time in collaboration with David Saltz and several of his students. In particular, I will discuss our early work on formulating a hierarchical framework for analyzing movement data and building simulations models and then follow this up with my more recent work with this area.
