**Course description & objectives:**

*Linguistics of Sign Language* introduces students to sign language linguistics on the basis of Israeli Sign Language. The course has a double focus: 1) it emphasizes the universal properties of language in signed and spoken modalities, and 2) aims to elucidate the interaction of these properties with the physical modality of language transmission and with the nature of the language community. The course is divided into two parts. The first part addresses all the essential aspects of ISL linguistic structure: phonology, morphological means, realizations of tense and aspect, word order rules, the system of classifiers, and prosody. The second part provides a glimpse into the history of Israeli Sign language and of the Deaf community in Israel. It provides evidence for the intricate interaction between linguistic structure and the history of language, illustrating the discussion of diachronic processes in ISL with multiple examples from the most recent research. The goal of the course is to demonstrate the contribution of sign language research to various subfields of general linguistic theory.
