Introduction to Morphology

Course number: 133.1.0450

Lectures: David Erschler, erschler@bgu.ac.il

Morphology is the branch of linguistics that deals with the internal structure of the words and how they are formed. The questions we will address include: What is a word? Does an orthographic word, something we put spaces around when we write, correspond to anything in our mental grammar? What are internal parts of the words and processes that create and combine them? The course will seek to answer these and other questions by examining morphological phenomena from across the world's languages.

Key words: Morphology; Morphological categories; Derivation; Inflection; Word Formation
