Health for All: Case Studies in Global Health Policy

Course description: Transforms in the structure of the global health system, as well as a growing interest in the health of people living in developing countries, are the cause of major shifts in global health policy. These shifts are evident in the growing financial investments in global health, as well as in the actions of local, international, governmental and non-governmental organizations. The need to find solutions to health problems in resource-limited settings was faced by many challenges but also resulted in innovative solutions. The course will review the various challenges and shifts in the realm of global health policy by investigating case studies of health services in resource-limited settings. From AIDS care in Kenya to the crisis in health workforce in Bangladesh, the course will focus on the shaping and practice of global health policy, and its impact on health services in resource-limited settings.

Case: Multidrug-Resistant Tuberculosis Treatment in Peru
Julie Rosenberg Talbot, Joseph Rhatigan

Case: The Academic Model for the Prevention and Treatment of HIV/AIDS
Peter Park, Arti Bhatt, Joseph Rhatigan

Case: BRAC’s Tuberculosis Program: Pioneering DOTS Treatment for TB in Rural Bangladesh
