

(1 credit)

001-2-2025/6/7

Prerequisite: Theoretical fish diseases course

The course is aimed to provide practical experience in fish disease diagnostics. The course is a practical lab course, during which the students are learning to diagnose diseases in fish, mainly from aquaculture farms at the Negev and Arava. Methods for fish dissection and examination for parasitic diseases (microscopic) as well as isolation and identification of bacterial diseases will be taught and practiced and a treatment suggestion will be considered.

Lecturer: Dina Zilberg
